

OPERATING INSTRUCTIONS & WARRANTY INFORMATION FOR SUPERIOR LITE 6-VOLT SINGLE LED

Do not look directly into LEDs

Your new Superior Lite is made primarily for night hunting, has a design of proven performance and when properly cared for, it should give years of trouble free use. The CREE rated 5 watt 228 lumen LED is one of the brightest single die LEDs available. The 6-volt NIMH battery pack is a minimum of 3.7 AH, weighing about 1 pound.

Operation of this light is relatively simple. Since the head is not equipped with a focus or switch, all operation is controlled through the 4 position click switch located on the battery box. Turn the switch to a comfortable light level desired. Operation for an extended period of time on high or click 4 may result in thermal shutdown. A lot of factors play into this including outside temperature and temperature of the head piece when high is selected. This shutdown feature is a safety feature; chances are, you would never know it is there. In event the light does go out, turn the click switch to position 3 or lower. Once the head has cooled down, the light will come back on.

Expect the following burn times:

Click 1: 80 hours

Click 2: 35 hours

Click 3: 10 hours

Click 4: 4.0 hours - extended periods of use on this position will shorten LED life.

Charging your light - a DC charging receptacle is located on the back side of the battery box. Plug your charger (6 volt DC, 300ma output) in this receptacle and charge approximately 1 hour for each hour of use, but never more than 15 hours.

Warranty : Your new Superior Lite is warranted to be free from defects in materials and workmanship for one year from the date of manufacture, when used properly and used for the purpose for which it is designed - night hunting. The warranty covers the replacement cost of parts to repair the product to proper working condition. Transportation and incidental costs associated with warranty items are not reimbursable. The warranty does not cover normal wear, or damage resulting from misuse, negligence, or accident. Furthermore, it does not cover units that have been altered, modified or repaired without authorization from the manufacturer. When returning light for repair, include enough information for us to contact you.
